The AI Discovery Workshop

AI Discovery Workshop

Purpose and Outcome

OBJECTIVES

Align AI with business priorities

Connect customer goals and challenges with relevant SAP Business AI capabilities → focus on embedded use cases

Identify & prioritize high-value AI use cases

Discover where AI can create measurable impact and focus on what matters most.

Define a clear path to AI Adoption

Agree on next steps, ownership, and direction through a practical AI Use Case Roadmap.

1

Prioritized AI Use Case Roadmap

A clear, business-driven view of the most relevant AI use cases, ranked by value and desired go-live date.

2

Business AI Capabilities in Scope

Understanding which AI Agents, Assistants, Embedded and Custom AI capabilities apply and why.

3

Clear Next Steps for AI Adoption

Alignment on ownership, sequencing, and follow-up actions that feed directly into the AI Adoption Plan.

OUTCOME

The AI Discovery Workshop is a **structured, business-** and **value-led** session that helps customers identify, prioritize, and plan **high-value SAP Business AI use cases**.

AI Discovery Workshop Formats At a Glance

Format	Low-Touch	Mid-Touch	High-Touch
When to Use	When time is limited, or customers are early in their AI journey	When customers want structured discovery with time for discussion	When deep, cross-functional exploration is required
Typical Duration	~3–4 hours (remote or onsite)	1 full day (onsite preferred)	Typically, 2 days (onsite)
Depth of Exploration	High-level, focused	Moderate depth across selected processes	In-depth across multiple processes and LoBs
Best Suited For	• Early AI maturity • Limited stakeholder availability • Need for quick orientation	• Medium AI maturity • Business & IT stakeholders • Explore concrete use cases	• High AI ambition and maturity • Strategic or transf. initiatives • Broad stakeholder involvement
Outcome	Concise AI Use Case Roadmap with prioritized opportunities and next steps	Detailed AI Use Case Roadmap with clearer prioritization and ownership	Comprehensive, multi-LoB AI Use Case Roadmap with strategic alignment

Sample Agenda

4h

Low-Touch AI Discovery Workshop

Workshop Agenda

Welcome & Objectives

- Introductions and workshop objectives
- Alignment on expected outcomes and success criteria
- Overview of the session flow

15 min

Business Context & Strategic Priorities

- Customer business priorities and strategic focus areas
- Key challenges across selected processes or functions

30 min

Relevant AI Capabilities Relevant to Your Business

- Overview of SAP Business AI and its role in supporting business outcomes
- Relevant Embedded AI capabilities aligned to customer processes
- AI Agents and Assistants (e.g. Joule) and their role in day-to-day work
- Selected Custom AI examples where standard capabilities may not be sufficient

45 min

Break

10 min

AI Use Case Exploration

- Exploration of AI opportunities across selected processes or roles
- Discussion of business value, impact and success criteria
- Identification of quick wins versus longer-term opportunities
- Clarification of assumptions, dependencies, and constraints

60 min

AI Use Case Prioritization & Roadmap

- Prioritization of identified AI use cases based on value and feasibility
- Sequencing of opportunities into a focused AI Use Case Roadmap
- Alignment on initial next steps and ownership

50 min

Wrap-Up & Next Steps

- Recap of key insights and prioritized AI opportunities
- Confirmation of agreed next steps and follow-up actions
- Alignment on how outcomes will be taken forward after the workshop

30 min

Always tailor the AIDW agenda based on:

Audience
(role & experience level)

Customer
Industry & Processes

Customer
Questionnaire & Input

Internal Objective &
Expected Outcome

LoB Solutions
in use

Customer Expectations

Optional agenda building blocks: select based on customer context

Strategy

**Business AI
Strategy**

**Cloud or
Transformation Context**

**Value
Case**

AI Capabilities

**Agents /
Assistants**

Embedded AI

Custom AI

Experience

(Live) Demos

Hands-on

**Customer
References**

Adoption

**Consumption
Model**

**AI Architecture &
Pre- Requisites**

Services

Not all building blocks are used in every workshop. Delivery Leads select only the elements that directly support the agreed outcome, customer maturity, and available time.

Sample Agenda

1 day

Mid-Touch AI Discovery Workshop

Workshop Agenda

Welcome & Objectives

- Introductions and workshop objectives
- Alignment on expected outcomes and success criteria
- Overview of the session flow

20 min

Business Context & Strategic Priorities

- Customer business priorities, strategic focus areas and transformation drivers
- Key challenges across selected processes or lines of business
- Alignment on where AI can create the most business impact

45 min

SAP Business AI Strategy & Capabilities

- Overview of SAP's Business AI strategy and value framework
- Relevant Embedded AI and AI Agents/Assistants aligned to customer context
- Selected Custom AI examples where standard capabilities may not be sufficient

60 min

Break

15 min

Process & Use Case Exploration

- Deep dive into selected end-to-end processes or functional areas
- Exploration of AI opportunities across roles, steps, and decision points
- Discussion of business value, feasibility, dependencies, and constraints

75 min

Lunch Break

60 min

AI Use Case Validation & Prioritization

- Validation of identified AI use cases against value and readiness criteria
- Differentiation between quick wins and more complex opportunities
- Prioritization into a focused AI Use Case Roadmap

90 min

Defining the Path to Adoption

- Alignment on sequencing, ownership, and dependencies
- Discussion of consumption model, activation considerations, and prerequisites
- Agreement on initial next steps

45 min

Wrap-Up & Next Steps

- Recap of prioritized AI opportunities
- Confirmation of agreed actions and ownership
- Alignment on how outcomes will be taken forward after the workshop

35 min

Depending on the customer context, the workshop can be structured around a specific **business process**, a **transformation initiative**, or an **industry-specific** perspective. The exploration approach is selected based on customer priorities, maturity, and the intended outcome of the session.

Sample Agenda

2 days

High-Touch AI Discovery Workshop

Workshop Agenda

Day 1

Welcome & Objectives

Set the objectives for the workshop, align on expected outcomes, and confirm the focus areas for the two days.

20 min

Business Context & Strategic Priorities

Discuss the customer's strategic priorities, transformation initiatives, and key business challenges across selected processes or domains.

45 min

Industry PoV & Benchmarking

Review industry trends, peer benchmarks, and leading practices to understand how comparable organizations are leveraging AI to drive efficiency, resilience, and growth.

60 min

SAP Business AI Strategy & Capabilities

Explore SAP's Business AI strategy, including AI Assistants, Agents and Embedded AI capabilities, and how they support measurable business outcomes.

60 min

Lunch Break

60 min

Process Insights & AI Potential Identification

Review available process assessments (e.g. Signavio Process Insights) and discuss where inefficiencies, bottlenecks, or deviations indicate opportunities for AI-driven improvement.

90 min

Break

15 min

AI Use Case Exploration – Process 1

Explore AI opportunities across one identified process including the roles, and decision points, focusing on value potential, feasibility, and dependencies.

75 min

Wrap-Up Day 1

Summarize key insights and opportunity themes, and confirm focus areas to be refined on Day 2.

30 min

Day 2

Recap Day 1 & Objectives for Day 2

Reconfirm priorities, validate scope, and align on the intended outcomes for the second day.

20 min

AI Use Case Exploration – Process 2

Explore AI opportunities across one identified process including the roles, and decision points, focusing on value potential, feasibility, and dependencies.

75 min

Break

15 min

AI Use Case Validation & Prioritization

Validate identified use cases against business value, readiness, and complexity, and prioritize them into a structured AI Use Case Roadmap.

90 min

Lunch Break

60 min

SAP Business AI & BTP for Custom AI Scenarios

Position SAP as the platform of choice for building, extending, and operating Custom AI scenarios, including architecture patterns, integration, and governance considerations.

60 min

Defining the Path to Adoption (60 min)

Align on sequencing, ownership, activation approach, and dependencies, including consumption considerations and prerequisites for prioritized use cases.

60 min

Wrap-Up & Next Steps (30 min)

Confirm the AI Use Case Roadmap, agree on next steps and ownership, and align on how outcomes will be carried forward into the AI Adoption Plan.

30 min

AI Questionnaire

Share a copy of the Questionnaire with your customer in the Workshop Preparation phase

Your input is essential for the AI Discovery Workshop

How can we enhance your business processes with AI?

- Review the statements in each section and consider if there's a need or opportunity in your organization to improve these areas with AI-driven solutions. Tick the checkbox for any statement that aligns with your current needs.
- Feel free to provide other ideas, comments or focus areas in the “Other Areas of Improvement” section.
- Submit your completed template to us at least 3-4 weeks before the workshop. This preparation will help us tailor the session to address your goals and explore relevant AI use cases.

Pre-workshop

Customer

ERP and Finance

- 1 Do your users face difficulties finding financial data like invoices, payment statuses, or budgets across multiple systems in a timely manner? ☐
- 2 Do your finance users lack timely recommendation alerts on tasks like payment approvals, cash flow, or overdue invoices? ☐

Customer Experience (CX)

- 1 Do your users manually process and validate product requirements during configuration, causing delays and errors? ☐
- 2 Is manual product tagging causing inconsistencies or limiting your ability to recommend relevant products to customers? ☐

Supply Chain (DSC)

- 1 Do your warehouse or transportation teams face delays during goods receipt due to limited visibility issues? ☐
- 2 Do your field service teams struggle to process service requests and identify critical maintenance issues? ☐
- 3 Are your maintenance teams unable to access equipment performance data, leading to reactive maintenance? ☐
- 4 Is manual tracking of product changes slowing innovation and delaying the development of new versions? ☐
- 5 Do production workers on the shop floor spend time manually updating and tracking product data? ☐
- 6 Are your field service agents spending too much time searching for key service history and customer data during service calls? ☐
- 7 Are your supply chain planners spending too much time adjusting forecasts and plans due to limited automation? ☐

Human Resources (HCM)

- 1 Do your HR managers struggle to identify patterns, trends, and actionable insights from employee data to support decisions? ☐
- 2 Is the creation of job descriptions a time-consuming task due to manual data collection or lack of structured input? ☐
- 3 Do your hiring managers face difficulties in creating role-specific, high-quality interview questions to evaluate candidates effectively? ☐
- 4 Is it challenging to personalize and track learning journeys for employees due to limited AI-assisted learning recommendations? ☐
- 5 Does your recruitment process take longer due to manual or inefficient applicant screening methods? ☐
- 6 Are your HR teams manually building skills frameworks, making it difficult to align skills development with organizational goals? ☐
- 7 Do your employees face delays in getting HR-related queries resolved due to the absence of AI-based, self-service answers? ☐

Key Stakeholders & Required Audience

The right mix of business, IT, and decision-makers is critical to achieving actionable AIDW outcomes.

SAP Stakeholders

- 1 AIDW Delivery Lead (SPoC)**
Responsible for workshop execution, customer interaction, and delivery of outcomes.
- 2 Virtual Team (Industry/Value/LoB/BTM Experts)**
Ensures industry-specific, value driven or line-of-business relevance and leads discussions with their respective expertise.
- 3 AI Solution Architect (optional)**
Provides AI architecture insights and supports the discussion about potential custom solutions and their technical feasibility.
- 4 Account Team (MP, AE, SAE, RISE EA,...)**
Responsible for customer communication, alignment with ongoing engagements and driving the next steps.

Customer Stakeholders

- 1 C-Level Sponsors (CIO/CTO/Business Owners)**
Define success criteria, ensure alignment with business priorities, and secure commitment for execution.
- 2 Business Process Owners**
Share process-specific challenges, validate AI use cases, and help prioritize them based on impact
- 3 IT Representative**
Offer input on technical feasibility, current system architecture, and integration requirements.
- 4 End-User Representatives or Functional Experts**
Provide real-world feedback on processes, validate the relevance of proposed solutions, and offer insights into usability requirements.

SAP Support & Partner Commitment

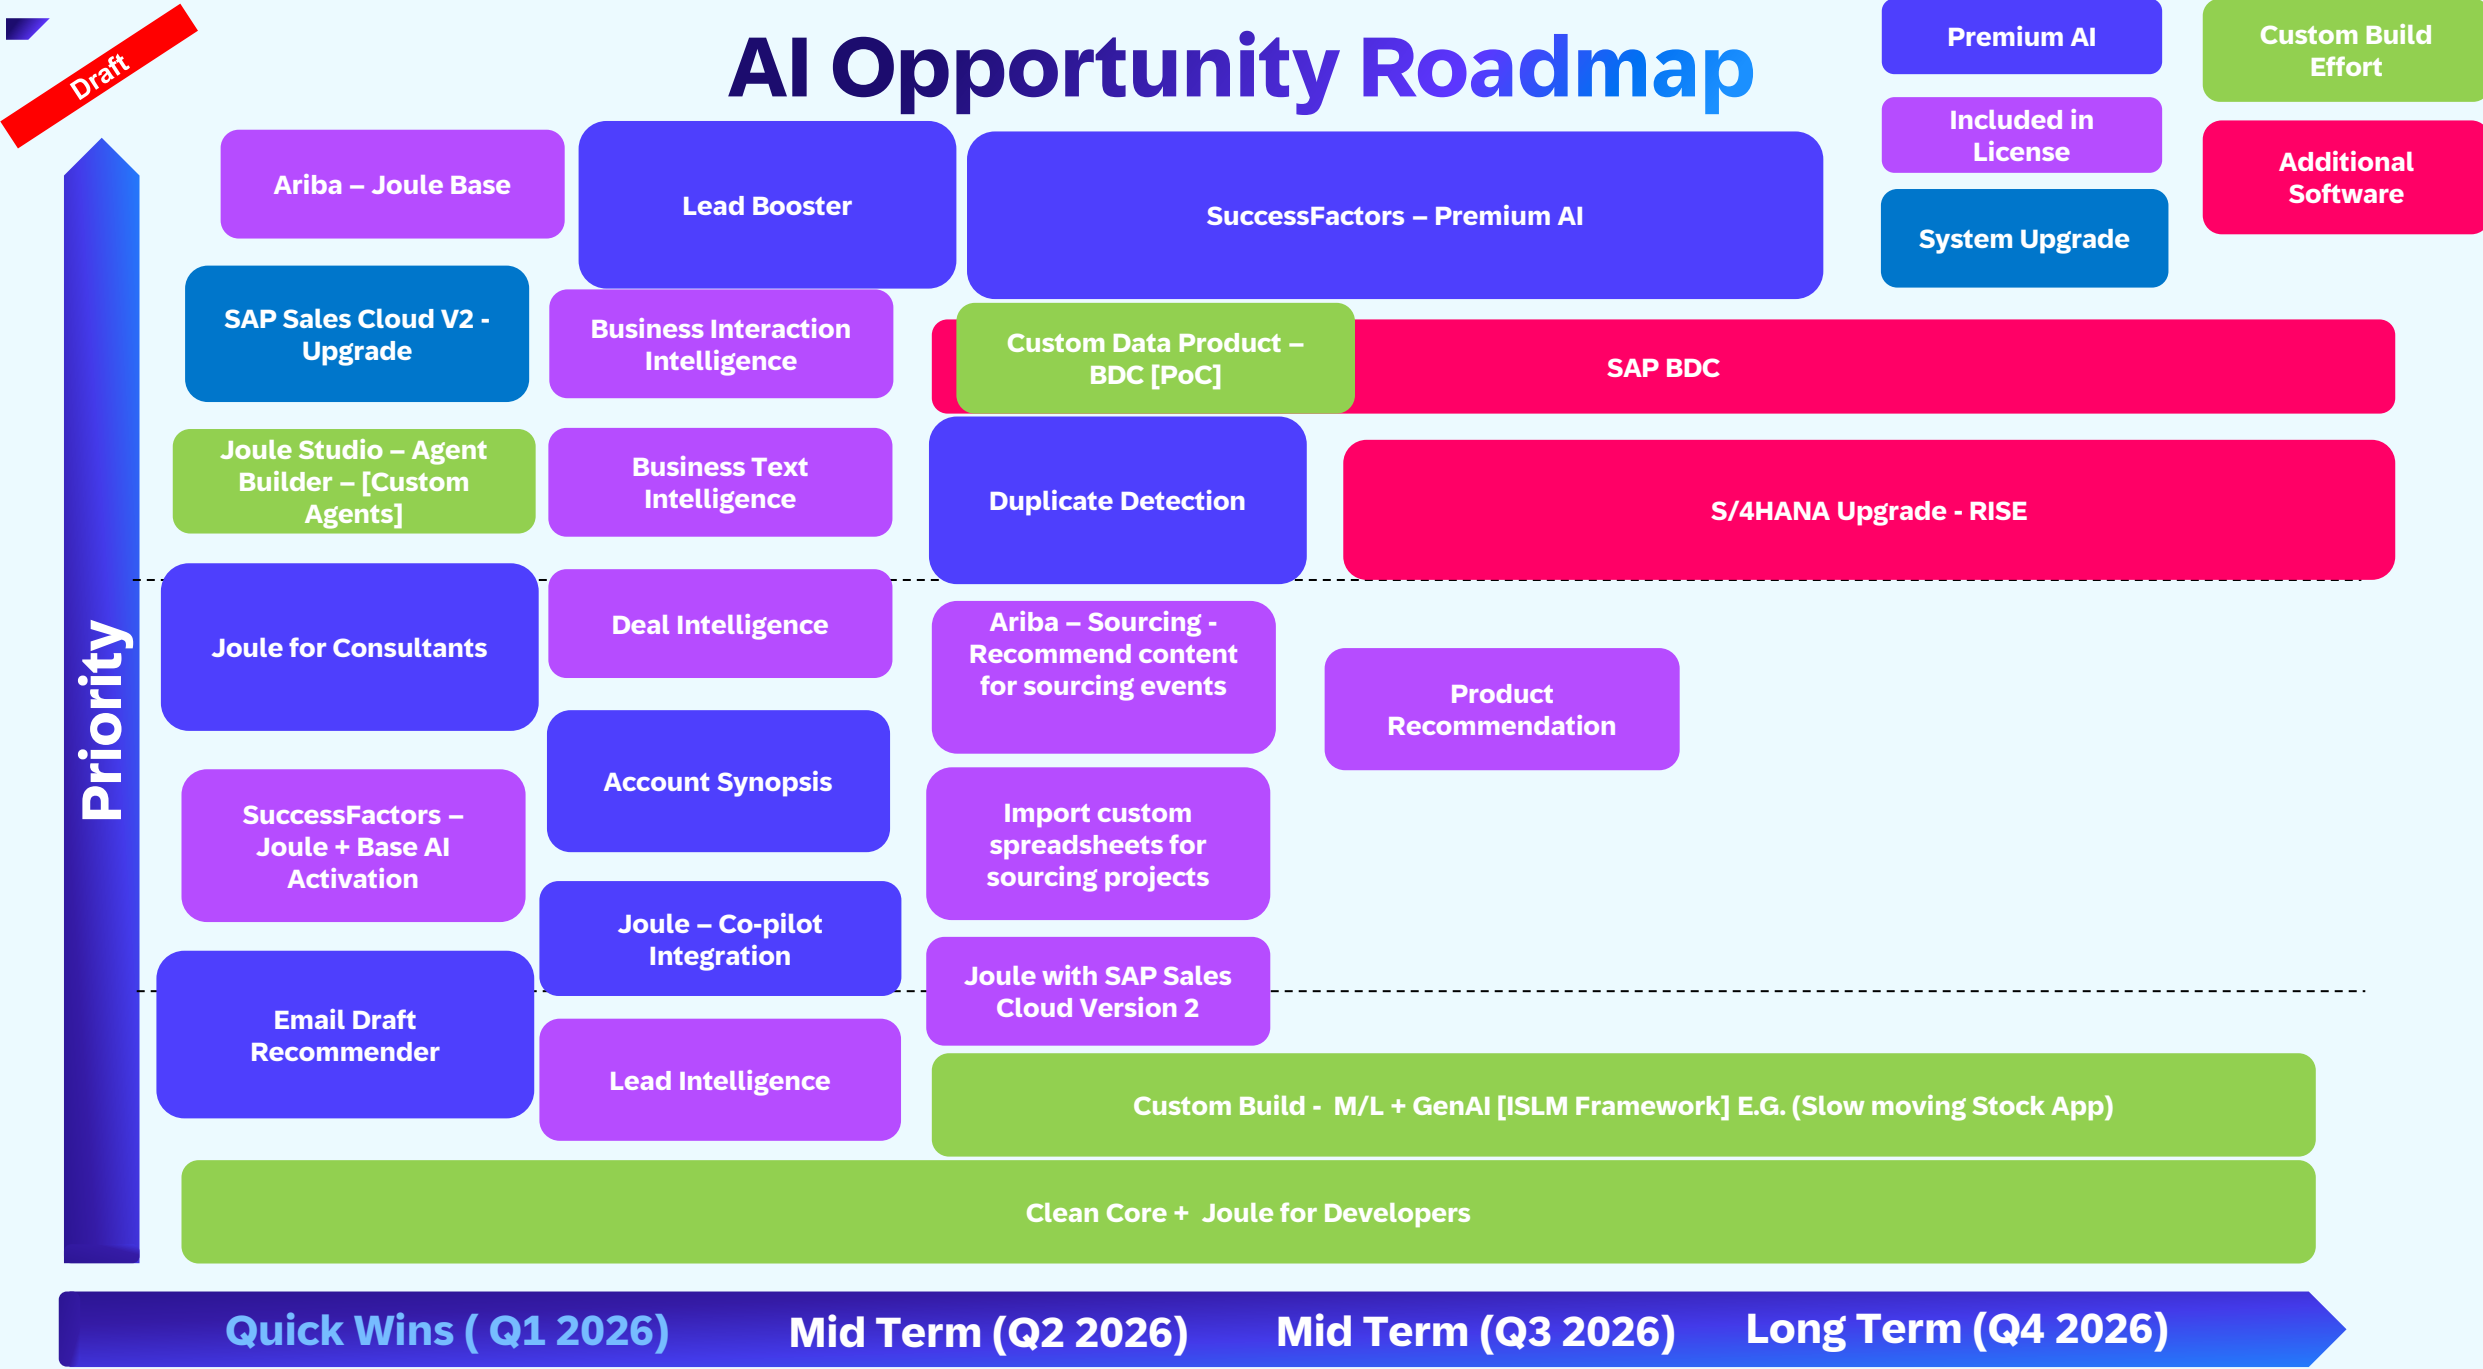

SAP will support Partners by...

- Helping to **select the most relevant customers**
- **Validating technical criteria for AI activation** (e.g. which RISE version are they on)
- **Aligning the customer with SAP AE**
- **Providing suggested AI capabilities** based on the SAP landscape of the customer
- Providing **access to AI Discovery workshop assets** – template workshop agendas, SAP AI strategy deck, prioritization matrix etc.
- **Collaborating on the preparation and delivery of the first workshop**, training Partner facilitators to run future workshops independently
- Offering **Technical coaching for Partners** on AI activations
- Deal registration for PE Sell partners on Partner portal to work with AI leads and opportunities in sync with and without conflict with other partners

Partners will be asked to...

- **Commit to running AI Discovery Workshops at 3+ customers in 2025**
- **Collaborate on customer selection** for the workshops
- Be **willing and able to own and drive the full process from workshop preparation** through delivery to post-workshop follow-up activities
- Commit to **sharing updates with SAP** on number of workshops delivered and pipeline created for tracking purposes, focussed on opportunities for:
 - # Joule activations
 - # Embedded AI activations
 - # Custom AI use cases to be developed
